

DP2 Cumulative Changes up to v19.0.23

This document lists the fixes, changes, and/or enhancements found in DP2 build version 19.

Cumulative from v19.0.0 to 19.0.23

- Added support for embedded profiles in PNG files.
- Added support for importing and exporting multilayer TIFF files.
- Added an example for ModifyKPLFunction() to the Programmer's Assistant reference information. It is found under Functions > Scripting > ModifyKPLFunction > Description.
- Added XMP metadata support.
- Added a Relative Image Crop, which lets you store an additional crop in the product layout instead of storing it in the Order Images.
- Fixed a problem applying color corrections while clicking on other images from Adjust Images.
- Fixed a problem with Export Images where intermittently the Order Info and Order Images didn't load in the dialog box.
- Improved ability to read non-compliant JPEG files. (The most tolerant mode requires a special configuration setting. Contact the support team for instructions on how to enable it.)
